

Google Sheets CMS

Content management guide for the archive

This archive uses a Google Sheets spreadsheet as its CMS. Edit the spreadsheet to update titles, descriptions, tags, credits, and media URLs. Changes appear on the site automatically.

Spreadsheet URL:

docs.google.com/spreadsheets/d/1aMXxMw9riTdR04_ykHXajCeHc9sG0zZSzPmPrFQWSc

Sheet 1: works

The main content sheet. Each row is one track.

COLUMN	REQUIRED	WHAT IT DOES
title	Yes	Track title. Also auto-generates the internal ID (slug).
description	No	Description shown in the credits panel. Leave empty for no description.
tags	No	Comma-separated tags. Must match tags defined in the <i>tags</i> sheet. Examples: ambient harp soft
year	No	Release year (e.g. 2026). Display only.
video_url	No	URL to the video file. Can be a local path (/content/videos/track-01-final.mp4) or a full URL.
thumbnail_url	No	URL to the thumbnail image. Same format as video_url.
audio_url	No	URL to a separate audio file. Leave empty if audio is embedded in the video.
active	No	Visibility toggle. yes = visible (default). Any other value = hidden.

Note: There is no id or order column. The ID is auto-generated from the title, and the order follows the row position in the sheet.

Example row

TITLE	DESCRIPTION	TAGS	YEAR	VIDEO_URL	THUMBNAIL_URL	AUDIO_URL	ACTIVE
pedal ambient, soft	A quiet, harp-driven ambient piece.	ambient, soft, harp, pedal	2026	/content/videos/track-01-final.mp4	https://r2.dev/posters/track-01-crop.jpg	https://r2.dev/audio/track-01.mp3	yes

Sheet 2: credits

Links contributors to tracks. One row per credit entry.

COLUMN	REQUIRED	WHAT IT DOES
title	Yes	The title of the track this credit belongs to (exact match). Example: pedal ambient, soft
role	Yes	Credit role. Examples: composition , production , mixing , mastering .
name	No	Person or entity name. Leave empty if the role itself is self-explanatory.
active	No	Same as works: yes = visible, anything else = hidden.

How linking works: Write the full track title exactly as it appears in the *works* sheet. The system matches by title automatically. Order follows row position.

Example rows

TITLE	ROLE	NAME	ACTIVE
pedal ambient, soft	composition	any	yes
pedal ambient, soft	production		yes
dark mystical epiphany	composition	any	yes

Sheet 3: tags

Defines the available tags. Tags not listed here won't appear in the filter UI.

COLUMN	REQUIRED	WHAT IT DOES
id	Yes	Tag identifier (lowercase). Used in the <i>works</i> sheet and filter buttons.
category	Yes	Either <code>mood</code> or <code>instrument</code> . Controls which filter group the tag appears in.
active	No	<code>yes</code> = visible. Anything else = hidden from the UI.

Example rows

ID	CATEGORY	ACTIVE
ambient	mood	yes
dark	mood	yes
soft	mood	yes
harp	instrument	yes
pedal	instrument	yes
synth	instrument	no

Quick Reference

Adding a new track

1. Add a row to the **works** sheet.
2. Fill in `title` , `tags` , and media URLs.
3. Add credits in the **credits** sheet using the track title as reference.
4. New tags need an entry in the **tags** sheet first.

Hiding a track

1. Set the `active` column to `no` (or anything other than `yes`).
2. The track disappears from the site on next load.
3. To restore, set `active` back to `yes` .

Changes are not instant. The site caches data for performance. Changes appear within a few minutes, or immediately after a redeploy.
